

Are you looking for smarter way to

REpower your business ?

Blueleaf Energy can provide a solar rooftop solution for you, whatever your roof type. You will lower your energy bills while doing your part to save the planet!

Contact us at info@blueleafenergy.com to learn more about our Solar Rooftop Corporate Solutions!

You Profit from our Team Experience

Blueleaf Energy has a track record of 20 years in the solar PV industry. Our experience from participating in over 5 GW of projects across the globe has positioned us to develop best practices and expertise unrivalled in the industry. By leveraging our capabilities, process standards and using the latest industry tools and technologies, we have become a trusted partner of companies in providing competitive solar rooftop solutions for their facilities.

Your Benefits of Partnering with Blueleaf

Energy Independence

By partnering with us, we will construct a solar rooftop system on your roof which will be connected to the internal network of your building. By generating energy on your premises, you become your own power supplier, providing electricity security to your business. This allows you to achieve partial or even total energy independence from the grid.

Savings on Your Electricity Bill

If you are a commercial or an industrial player with a large rooftop space and high electricity demand during the daytime, you can save money on your electricity bill every month by partnering with us to produce your own green energy.

The reduction in solar PV costs now makes it possible for solar rooftop systems to generate electricity at a fraction of the cost of the power that comes from your socket. With utility rates on the rise, signing a solar PPA with us locks in your electricity costs today, making you realize savings for the next 20 years.

If electricity is one of your largest operating expenses, we encourage you to consider partnering with us to build a solar rooftop system. We will supply you with clean solar energy with no capex required on your part and we only bill you monthly for the electricity you consume. You will lock in a lower rate for the solar electricity produced and save money from Day 1.

Everyone Wins with a Solar Rooftop System

Besides realizing significant electricity savings, participating in the transition to a low carbon economy will have a positive effect on your corporate image. Consumers around the world are clamoring for safe, clean energy and are enthusiastic to do something positive for the environment.

By promoting sustainability and responsibility towards the environment, you provide a meaningful differentiation for your company which can potentially increase the resale value of your property.

Unlike conventionally generated power from fossil fuel sources which adds to the greenhouse gas build up, solar PV is a low carbon generation technology that

Roofs vary according to their structures, slopes and coverings. Our extensive solar rooftop experience has enabled us to put together one of the most advanced and complete corporate solutions offerings for companies who are either taking part in the RE100 global initiative or just want to do their part in transitioning to a low carbon economy. Blueleaf Energy can provide a solar rooftop solution for you, whatever your roof type. This means that you can benefit from a solar system of the highest quality and reliability. You will also lower your energy bills while doing your part to save the planet!

Energy for your Corporate Solar Rooftop

Optimized Self Consumption

To realize maximum energy savings, Blueleaf Energy will design and develop an optimized solar rooftop system for your premises.

Our engineers will prepare a system design for your building based on your load profile and available roof space. Using our calculation tools, we will design for you a solar system that is consistent with your power consumption patterns to help you achieve your energy savings goals. Once the design is finalized, we will handle the construction of the solar rooftop system, managing the integration, customization, commissioning and maintenance of the system.

Solar Made Simple, even with our Off-Site Option

Going solar is now easier than ever!

In select countries we also develop off-site renewable energy projects and supply energy directly to our corporate clients.

Our portfolio of high performance systems across Asia Pacific produce a high energy output. By subscribing to our off-site PPA option, we can help further increase your company's consumption of clean sustainable energy. As a leading solar developer and engineering services firm, we are uniquely placed to help you lower your energy bills and help you make the transition to clean and sustainable energy.

produces electricity without creating harmful by-products like CO2.

With solar rooftop systems, more companies are able to locally generate clean solar electricity and become less reliant on their power utility. This will increase competition in the electricity market and generate better market efficiency.

Decentralized solar power generation effectively reduces stress on the grid and minimizes losses in the power distribution system. By developing more solar rooftop systems, together we can also help the grid operator cover future increases in electricity demand.

Save money and be protected against electricity rate increases

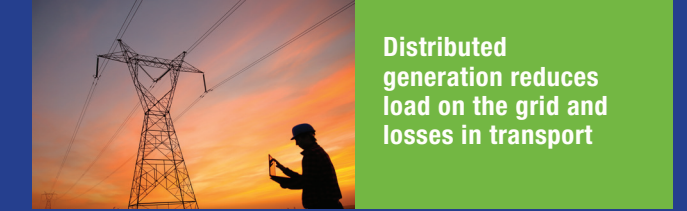

Positive image for your company

Reduce CO2 emissions in the country

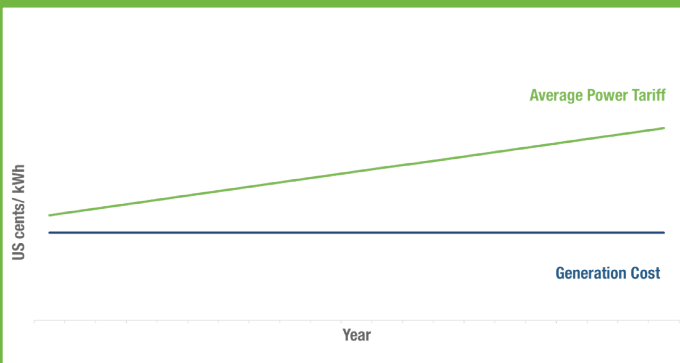

More competition in the electricity market will generate better efficiency

Distributed generation reduces load on the grid and losses in transport

Energy Savings

Searching for a Corporate Solar PPA Partner?

We can help provide you with a fully optimized solar rooftop solution.

Blueleaf Energy is Macquarie Capital's solar corporate energy solutions platform that offers comprehensive solar expertise from development, finance, delivery, execution and asset management.
